Date: 29th March 2022, 9.00 AM-10.00 AM (Italian time)

Duration: 1 Hour

Learning objectives

High-sensitivity troponin can be considered a "new" marker of myocardial injury that allows a continuous and non-dichotomous quantitative use in the diagnosis of myocardial infarction, in particular of NSTEMI. The introduction of Point-of-Care testing hs-cTn revolutionizes the theory and practice of this cardiac diagnostic test, in particular in the setting of the Emergency Department and cardiac emergency networks

Target audience

Physicians, Pathologists, Biologists, Biomedical Laboratory Technicians, Pharmacists, Nurses, Lab Directors, Lab Supervisors, Lab Managers.

Participants: 250 (*Attendees need to register*)
